**Subject:** Toxicological Evaluation of Results from an Ambient Air Sample for Volatile Organic Compounds Collected Downwind of the XTO Energy Inc - Sue Barnett Unit 1H 2H 4H Site (Latitude 32.645238, Longitude -97.077085) in Arlington, Tarrant County, Texas

Sample Collected on December 22, 2015, Request Number 1601003 (Lab Sample 1601003-001)

---

## Key Points

- Reported concentrations of target volatile organic compounds (VOCs) were either not detected or were detected below levels of short-term health and/or welfare concern.

## Background

On December 22, 2015, a Texas Commission on Environmental Quality (TCEQ) Region 4 air investigator collected a 30-minute canister sample (Lab Sample 1601003-001) downwind of the XTO Energy Inc - Sue Barnett Unit 1H 2H 4H site in Arlington, Tarrant County, Texas (Latitude 32.645238, Longitude -97.077085). The sample was collected in response to a citizen's complaint of a rotten egg odor and shaking, dizziness, headaches, and a bad taste in their mouth. The investigator did experience a light to moderate, constant exhaust odor but no health effects while sampling. Meteorological conditions measured at the site or nearest stationary ambient air monitoring site indicated that the ambient temperature was 71°F with a relative humidity of 58%, and winds were from the south (180°) at 6.3-9.1 miles per hour. The sampling site was greater than 501 feet from the possible emission source (fracking). The nearest location where the public could have access was between 101 and 300 feet from the possible emission source. The sample was sent to the TCEQ laboratory in Austin, Texas, and analyzed for a range of VOCs. The list of the target analytes that were evaluated in this review is provided in Attachment A. The VOC concentrations were reported in parts per billion by volume (ppbv) (Attachment B and Table 1).

Please note that the available canister technology and analysis method cannot capture and/or analyze for all chemicals.

## **Results and Evaluation**

Reported VOC concentrations were compared to TCEQ's short-term health- and/or welfare-based air monitoring comparison values (AMCVs) (Table 1). Short-term AMCVs are guidelines used to evaluate ambient concentrations of a chemical in air and to determine its potential to result in adverse health effects, adverse vegetative effects, or odors. Health AMCVs are set to provide a margin of safety and are set well below levels at which adverse health effects are reported in the scientific literature. If a chemical concentration in ambient air is less than its comparison value, no adverse health effects are expected to occur. If a chemical concentration exceeds its comparison value it does not necessarily mean that adverse effects will occur, but rather that further evaluation is warranted.

All of the 84 VOCs were either not detected or were detected below their respective short-term AMCVs. Exposure to levels of VOCs measured in this sample would not be expected to cause short-term adverse health effects, adverse vegetative effects, or odors.

Please call me at (512) 239-3444 if you have any questions regarding this evaluation.

ND - not detected  
NQ - concentration can not be quantified due to possible interferences or coelutions.  
SDL - Sample Detection Limit (Limit of Detection adjusted for dilutions)  
SQL - Sample Quantitation Limit (Limit of Quantitation adjusted for dilutions)  
INV - invalid  
J - Reported concentration is below SDL.  
L - Reported concentration is at or above the SDL and is below the lower limit of quantitation.  
E - Reported concentration exceeds the upper limit of instrument calibration.  
M - Result modified from previous result.  
T - Data was not confirmed by a confirmational analysis. Compound and/or results is tentatively identified.  
F - Established acceptance criteria was not met due to factors outside the laboratory's control.  
H - Not all associated hold time specifications were met. Data may be biased.  
C - Sample received with a missing or broken custody seal.  
R - Sample received with a missing or incomplete chain of custody.  
I - Sample received without a legible unique identifier.  
G - Sample received in an improper container.  
U - Sample received with insufficient sample volume.  
W - Sample received with insufficient preservation.

\*A simple asphyxiant displaces air, lowering the partial pressure of oxygen and causing hypoxia at sufficiently high concentrations.

ppbv - Parts per billion by volume.

ND - Not detected.

NQ - Concentration can not be quantified due to possible interferences or coelutions.

SDL - Sample Detection Limit (Limit of Detection adjusted for dilution).

SQL – Sample Quantitation Limit (Limit of Quantitation adjusted for dilution).

INV - Invalid.

J - Reported concentration is below SDL.

L - Reported concentration is at or above the SDL and is below the lower limit of quantitation.

E - Reported concentration exceeds the upper limit of instrument calibration.

M - Result modified from previous result.

T - Data was not confirmed by a confirmational analysis. Data is tentatively identified.

F - Established acceptance criteria were not met due to factors outside the laboratory's control.

H – Not all associated hold time specifications were met. Data may be biased.

C - Sample received with a missing or broken custody seal.

R - Sample received with a missing or incomplete chain of custody.

I - Sample received without a legible unique identifier.

G - Sample received in an improper container.

U - Sample received with insufficient sample volume.

W - Sample received with insufficient preservation.

D1 - Sample concentration was calculated using a dilution factor of 4.
